

2 > 5 DECEMBRE 2008
Paris Nord Villepinte - Hall 6 - France

SCS Paris 2008

The trade show for electrical, automation and mechatronics technologies for the industrial and energy performance of companies

Following its first year in Paris in 2006 and Lyon in 2007, SCS Automation & Control is **evolving in 2008** to become **SCS Paris 2008!**

Better targeted, more effective and more internationally focused, SCS Paris 2008 is **the only event to cover the performance of industrial processes**, as it **brings together in one venue electrical, automation and mechatronics solutions designed for manufacturers**, whatever their business sector: chemicals, pharmaceuticals, cosmetics, food processing, automotive, aeronautics, packaging, handling, mechanics industries, OEM, graphics, energy and raw materials industries, etc.

In a global environment which is constantly seeking the best performance, a company's development requires the latest technology solutions: whether designing and developing new products and procedures or new facilities, automating production, better managing energy consumption, working in project mode or in partnership, organizing and validating IT developments, supervising equipment maintenance, ensuring production complies with quality standards, or increasing productivity through more effective solutions...

Over four days, SCS Paris 2008, a **transversal European trade show**, will present a **unique and exhaustive spectrum in terms of automation, electrical energy, transmissions, linear guidance, drive, measurement/control, services...**

Themes for the headline events for 2008 have already been announced: **sealing of fluids, energy efficiency, mechatronics (in partnership with Thésame, Cetim and Artema), themed villages and a new award intended to promote Engineering Offices.**

**Join us from 2nd to 5th December, 2008,
Hall 6 – Paris–Nord Villepinte**
